No staining of the temporary crown.
Easy Clean Up

The excess cement just peels away.
Temporary Crown after 1 Week

Gingival tissue is healthy with no signs of inflammation.

Healthy Tissues means no bleeding when taking final impressions.

Temrex Corporation  The Right Choice!
Use of Releasing Agent

• Releasing Agent can be added to crown margin to help in removing material.
• It can also be added to the material to decrease adhesion to tooth. A small amount incorporated into the mix or added to the incisal edge of the preparation will decrease adhesion.
The final restoration placed. The gingival tissue is healthy with no signs of irritation.
